

Childhood Immunization Status (CIS)

The measure includes the number of children who turned 2 years old during the measurement year and who were continuously enrolled in Louisiana Medicaid during the measurement year. The rate (percentage) shows how many of these children received all the immunizations in Combination 2 or Combination 3 by their second birthdays.

Combination 2 includes four doses DTP or DTaP; three doses IPV; one dose MMR; three doses Hib (HEDIS® reduced the 2008 and 2009 requirements to two doses due to vaccine shortage); three doses hepatitis B; and one dose VZV (chickenpox).

Combination 3 includes Combination 2, plus four doses pneumococcal conjugate.

Notes:

- Rates shown are for Medicaid-only recipients.
- Rates shown for 2006 through 2011 exclude Medicare dual eligibles and third-party liability.
- Claims for 2006 through 2011 have a 6-month claim lag.
- Rates shown are based on calculations utilizing only immunization claims paid by Louisiana Medicaid and may differ from calculations/data from the Louisiana Immunization Network for Kids Statewide (LINKS) immunization registry.
